Arunya,

Below are the requirement in the order of priority:

1. Update the AD User group from "dms_u_it_...." to "dms_p_it_.." for all subsites under site collection.

PesudoCode:(NOT tested)

```
UpdateUToPUsers($spSite){
foreach($web in $spSite)
{
    $usersList= $web.AllUsers;
    foreach($user in $users)
    {
        if($user.ToString().Contains("dms_u")
        {
            #"dms_u_it_" -replace "dms_u","dms_p"
            $modUser = $user -replace "dms_p"
            #IF Active DIRECTORY UPDATE IS NEEDED..
            Get-ADUser -Filter using $user
            Set-ADUser -displayName $modUser
            #SharePoint Group Name update
            $user.DisplayName = $modUser
        }
    }
}
```

Second Requirement

Automation of creation of views for libraries or list with same columnnames across different site collections.

Solutions:

1. JavaScript(Not tested)SP.View

<https://msdn.microsoft.com/en-us/library/office/jj245986.aspx>

2. PowerShell

<http://get-spscripts.com/2012/02/managing-creating-and-deleting.html>

3. Create a SharePoint feature to create views
